

## Cantilever Racking

### With Platforms

*Storage for long products, while utilizing full warehouse height.*

#### General Introduction:

Platforms or mezzanines can be created above the cantilever racking, also multitier arrangements can be made similar to a Multitier shelving system. Platforms can be created at heights and provided with stairways for access.

This type of system is particularly useful for storing a wide variety of goods with smaller SKU size. Applications involving wide & varying variety of SKU mostly use the multitier cantilever racking. It is the ideal solution for storage of oversized or bulky items. The list of items to be stored includes plastic tubing, steel pipes, profiles and wooden planks. Heavy & bulky items with higher picking rate can be stored at the bottom tier while light & non-bulky items can be stored on the top tiers.

#### 'Jay' Multitier Cantilever Racking using Cr-UBe500 Medium duty series or Cr1000 Heavy duty series
