

Cartoon Live Storage
 (Live Picking)
Fifo for cartoon, boxes & crates.

General Introduction:

Racking for Cartoon live storage or live Picking is made up of slightly inclined platforms of wheels & rollers, on which the goods are deposited at one end. They then slide down on their own until the far end, positioned at the exit aisle. This system guarantees perfect product turnover, prevents interference in the replenishment and collection of material, and increases speed in order preparation. It is designed for areas in the warehouse with a large volume of picking as they increase the number of lines to prepare and remove the need for personal to make unnecessary journeys when doing these operations. The racking for live picking requires a loading or replenishment aisle and a preparation aisle. As a rule, they are installed in areas with considerable picking activity, but also in assembly chains, buffer warehouses between two work points, etc.

'Jay' Cartoon Live Racking	
Applications	A wide range of sectors make use of this storage system, ranging from warehouses for mass consumption products, pharmaceuticals or cosmetics, to IT and car industry articles, etc.
