

Compactors
 Economise your costly office floor space.

General Introduction:

Mobile Shelving-Compactors is a compact archive storage system comprising of shelving or lockers mounted on mobile bases which slide along rails. This means that all but one of the aisles between the shelving units are eliminated and the modules are moved to access the required aisle.

This are compact storage system, therefore storage space can be doubled, or the amount of space required reduced. Mobile shelving is ideal for the storage of all types of books and documents, making of a perfect system for office libraries, publishing houses, technical archives, and many more. It can also be used to store other types of small articles, such as pharmaceutical products or spare parts. Mobile shelving-Compactor system adapts perfectly to the available space and to the characteristics of the product being stored.

'Jay' Compactors	
Applications	<ul style="list-style-type: none"> • Engineering Stores • Archives • Offices • Small parts warehouse • Pharmaceuticals • Filing & document storage
