

Mobile

Pallet Racking

Obtain new storage space from aisles.

General Introduction:

'Jay' mobile pallet racking systems comprise pallet racking, which is mounted on mobile bases. Equipped with motors, the racking can then be moved via rail guidance to locations where a racking aisle is required. This operating principle enables 9 out of 10 aisles to be obsolete, thereby creating new storage space. The racking system can be controlled centrally from the control cabinet, and decentralized from an individual rack or by remote control. When individual aisles open, state-of-the-art sensor technology and variable control options ensure ease of operation and absolute safety.

'Jay' Mobile Pallet Racking	
Applications	Mobile pallet racking saves on working aisle widths & creates space . <ul style="list-style-type: none"> • FMCG companies • Food & Beverages • Pharmaceuticals etc
Advantages	<ul style="list-style-type: none"> ➔ Upto 90% space reduction in comparison with conventional pallet racking. ➔ 100% Access to each pallet. ➔ Suitable for medium quantities of goods and medium number of different items with a low access requirement.
