

Multi-tier

Long Span Shelf Racking

Optimising individual storage, utilizing the whole height of the warehouse.

General Introduction:

The importance of taking full advantage of the space of the warehouses requires solutions which make it possible to access the highest levels.

One of these solutions consists of installing high-bay racking with one or several levels of gangways or elevated aisles supported on the racking itself.

Access to the different levels of gangways is made by means of stairways located in suitable places, fitted in function of accessibility and safety.

As a compliment to the stairways, freight lifts or scissors lifts can also be installed.

'Jay' Multi-tier Long Span Shelf Racks

Applications

The areas of application for this type of racking are extremely varied:

- Warehouses for spare parts.
- Packaging warehouse.
- Warehouses for industrial supplies and DIY products
- Warehouse for hanging garments.
- Bookshops.
- Archives.

Advantages

- ➔ Immediate Access to all articles
- ➔ Flexible & expandable
- ➔ Easy to assemble.
